CONSTRUCTION ACTIVITY NOTICE

Christmas Brook Culvert

July 6, 2018

Meacham Street/Latham Street.

This correspondence provides an update for the Christmas Brook Culvert Project.

Work Activities: Culvert installation along Meacham Street / surface restoration

Impact to Adjacencies:

- Culvert installation is finishing up along Meacham Street and the large pieces should be installed on/before July 13, 2018. Access to the Facilities Building along with the residential properties nearby is being coordinated. Vehicle traffic should utilize Heating Plant Drive to access the east side of the Facilities Building. Pedestrian access is available but limited. Visitors looking to access the Facilities Building should continue to use the main entrance off Latham Street and the parking lot next to the field house.
- Surface preparation and restoration will begin the week of July 9 and continue through October/November. Activities that will occur during this timeframe: road repair/replacement, installation of sidewalks and curbs, landscaping and fencing.
- There will be temporary traffic impacts (one lane) and pedestrian pattern adjustments during the surface preparation and restoration along Meacham and Latham Street.
- Culvert installation has shifted to the west side of the Christmas Brook inlet, along Latham Street. This culvert installation will convey water from the Public Parking Lot to Christmas Brook. Minor traffic impacts will be experienced.
- At some point in the future, the existing box culvert beneath Latham Street will need to be removed. This will require some traffic adjustments, such as one-lane with Police detail during the day. This work has yet to be scheduled but notice will be sent out in advance.
- Further circulation of this document would be greatly appreciated.
